Bleacher seating, is best described as a fixed deck tiered grandstand without defined seats. Audiences and spectators can sit down directly on the tiered deck levels (with carpet & cushions) or individual chairs and sofas can be used to offer a more comfortable setting.

AES bleacher grandstands are extremely popular, as the structures can be designed to fit a range of spaces within a venue and the product is the perfect way to elevate attendees and provide sightlines that you need for the event.

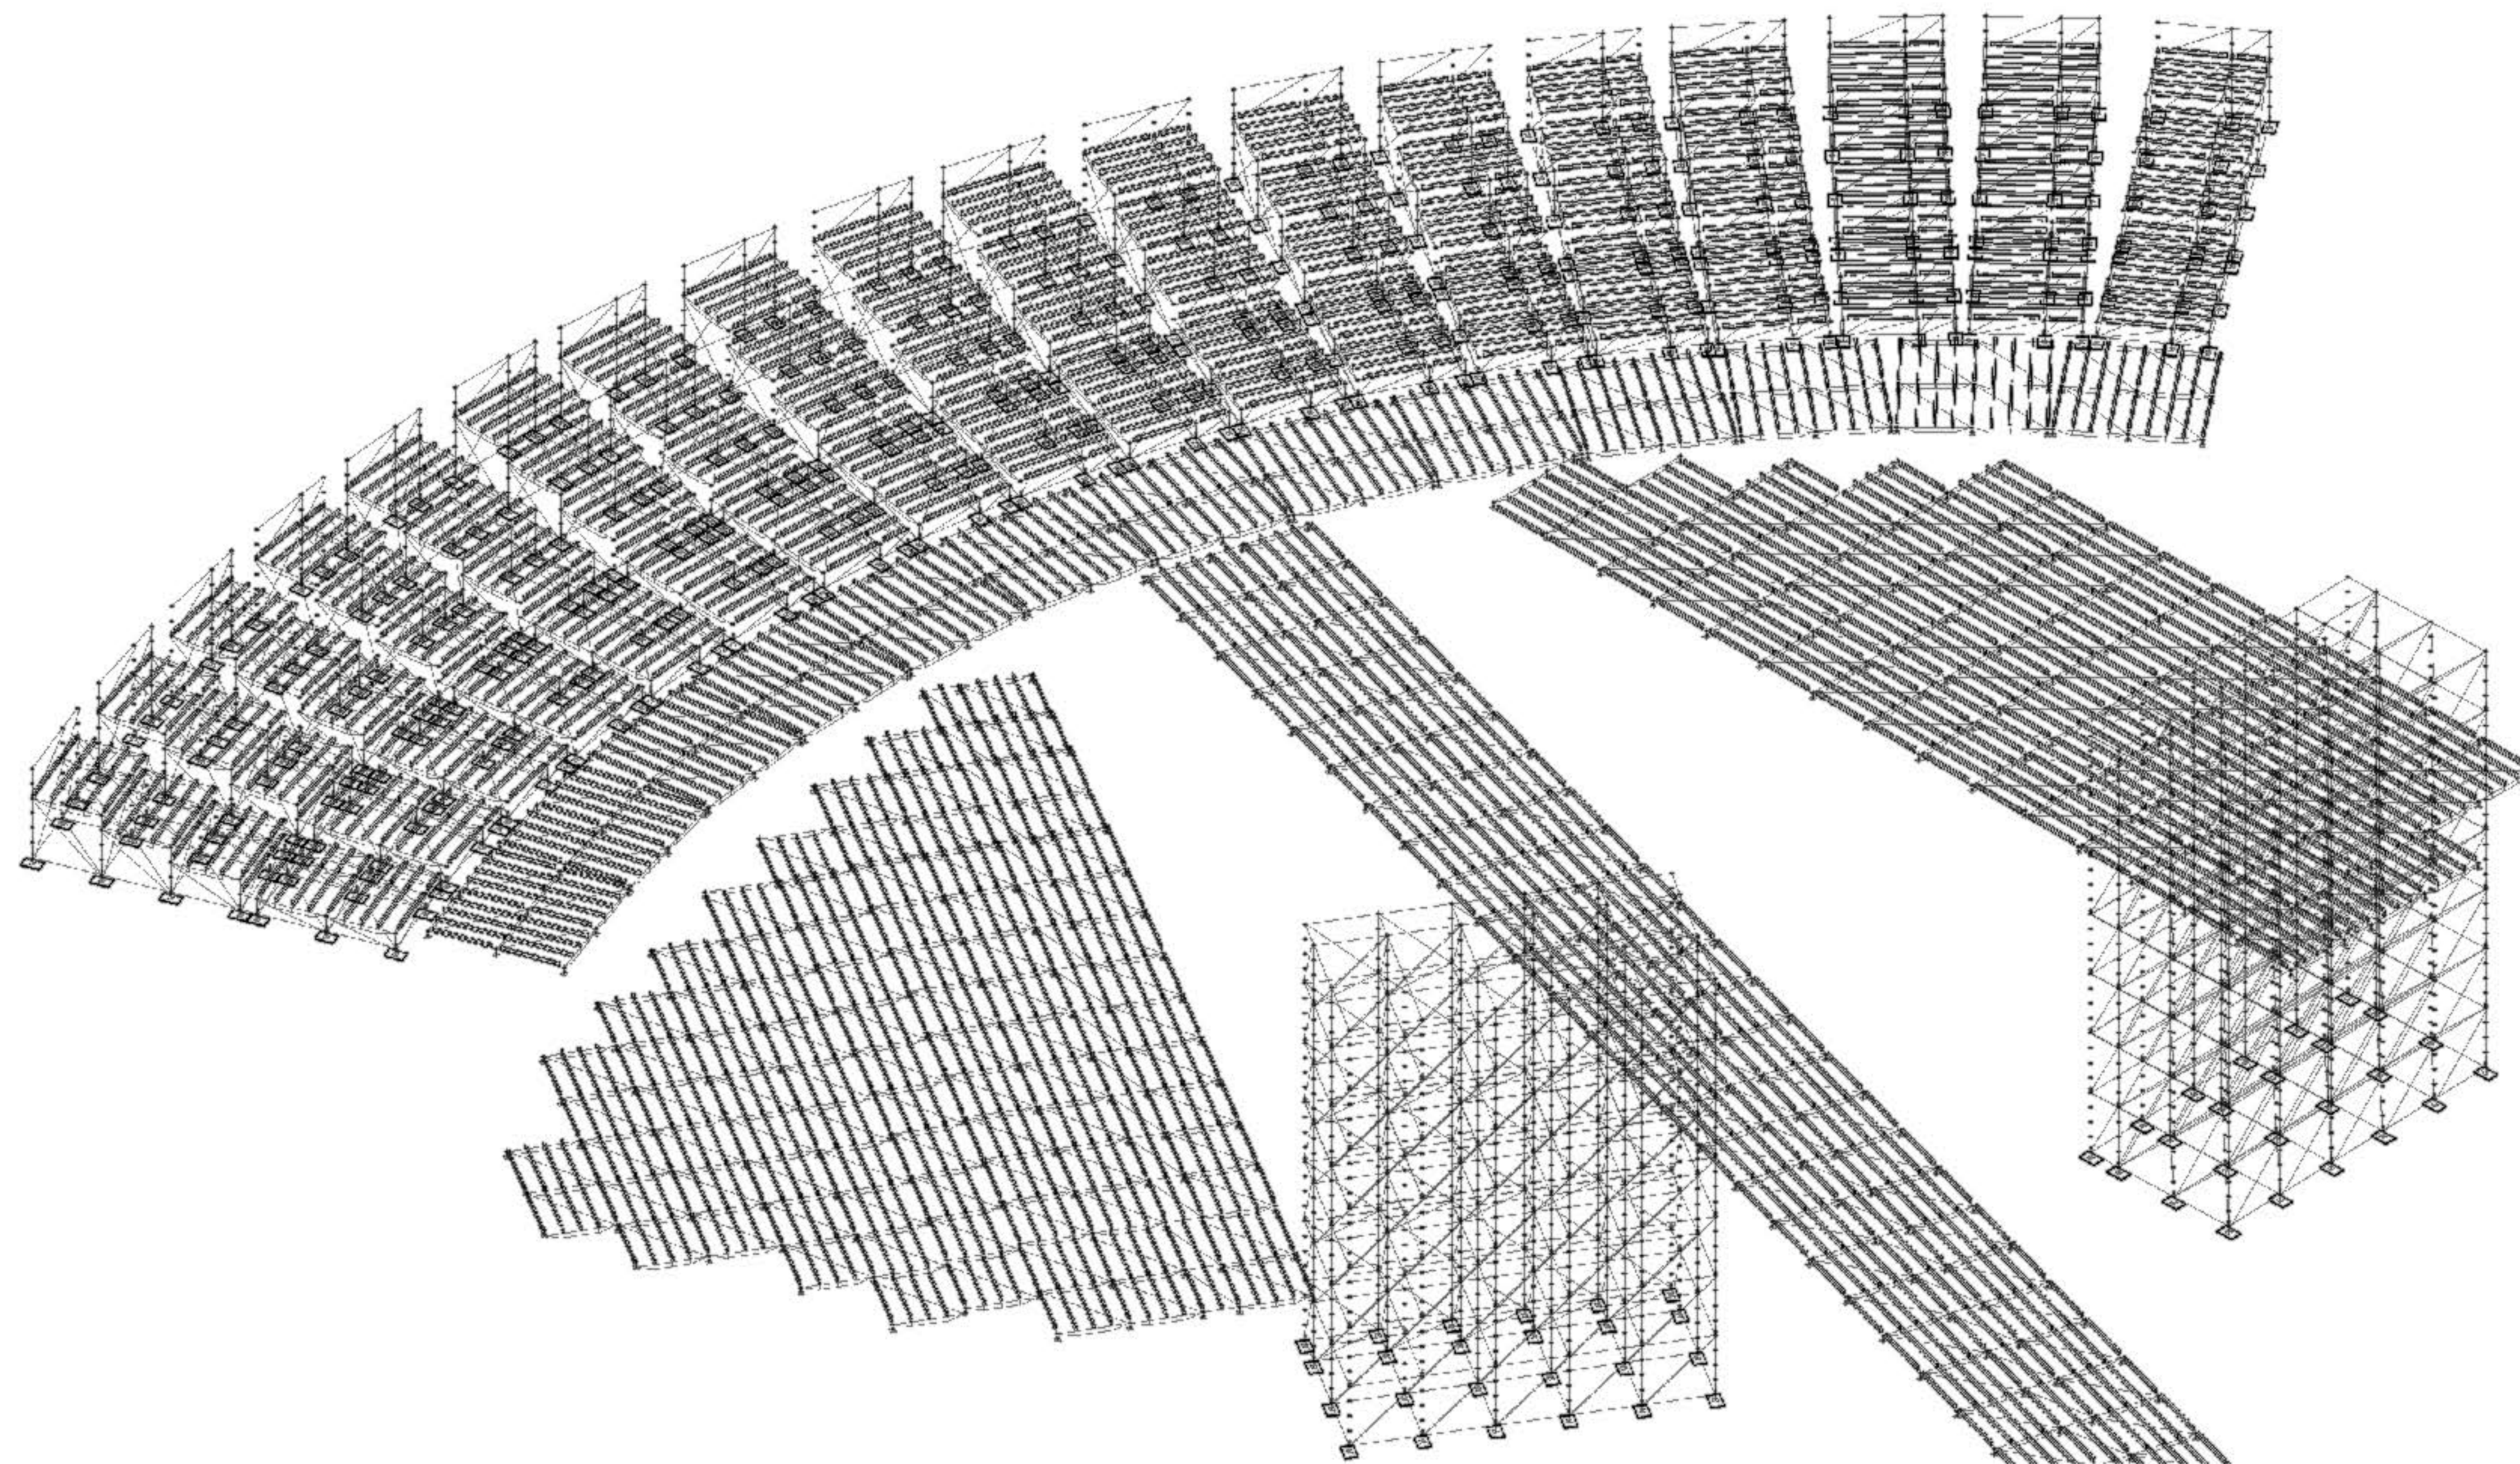

One of the main benefits of the bleacher seating layout is that, due no fixed seating, they are suitable for all shapes and sizes of people. They are often used in school halls and gymnasiums as they are ideal for smaller children who don't take up a whole seat and are happy to squash together..

Available to be built from ground level or raised, the bleacher deck can be constructed with the risers (tiered level) installed at various heights, based on the venue requirements. The seating plan for bleachers is always designed with interior aisles and guardrails that adhere to all access and egress safety protocols.
